

COVID Immunization Clinic

The immunization clinic activity is designed to support a COVID vaccine clinic where a user would only need to administer a vaccination to patients who do not need any additional medical care. A Health Maintenance topic will be applied for patients based on the guideline groups for vaccine and on the Registry. If you don't see the topic applied, it could be due to those factors. After the first dose is administered it will show within Health Maintenance.

Try It Out

1. Click on the  Imm Clinic button on the **Schedule** toolbar.

Make sure not to select a current patient on the schedule.
