

COVID Vaccine Administration Using Rover

Documenting immunization administrations in a fast-paced setting like an immunization clinic or a drive-through location just got easier, because you can do it in Rover on a mobile device.

Typically, there are two parts to documenting an immunization—checking the patient in and then documenting the administration.

Try It Out: Check the Patient In

1. When a patient arrives scan the barcode they received in MyChart.
2. You're taken to the Patient Summary. Tap **Document** to enter the patient's answers to the immunization questions.
3. Tap the **Back** arrow to save your work.
4. From the Patient Summary click Check-In. The patient is now ready for their vaccine.

Summary

Cameron, Penny 8/17/1978 42y F

Try It Out: Document the Administration

1. From the schedule, either tap the patient's name or scan the barcode they received in MyChart.
2. In the COVID-19 Vaccine section, tap **Administer COVID-19 Injection** for the corresponding vaccine you will be administering.
 - a. You can scan the barcode for the vaccine if you have one available.
 - b. When you're administering your first vaccine of the day, you might need to enter the product's administration details. After the first administration, details are copy forward to the rest of your shift's immunizations, so you don't need to enter them repeatedly.
3. On the final screen, review details if necessary, and select a site.
4. Tap **Accept** to finalize your documentation.
